Been having some issues since I have installed TT4.0 Beta, and I have never experienced this kind of FPS drop in Renegade before 4.0.

Just noticed my game drops to 20 fps or less randomly and goes away after a few seconds, and continues to do so every couple of minutes or so. My fps is usually at 60+ and never drops but with 4.0 i'm getting some issues.

MY specs

Windows 7 Home premium 64bit

Intel i7 920 2.67GHz

9Gb DDR3 Ram

Nvidia GTS 250 1Gb

What happens when you disable Vsync? You can disable it by pressing ESC in-game, pressing on the 'Options' button, then clicking on 'Extended Options' and disabling it in the menu there.

Why do u have 9gb ram?

If you dont have 3x3gb your just Raping your tir-channel timings, or for that matter its dropped to two channel.
