I've tried to install TT multiple times, i have no idea what the problem is, every time i load up the game after installing TT, ingame i can't move as if my keys config are not registered, i just sit there staring at the PT in first person unable to move or do anything from ingame, i cant access the options from in game since ESC key also doesn't work..

Any help would work, thanks!

I was told to come here to report "bugs" but apparently nobody wants to help!

Start the game and on the main menu select "options" then "controls" then press "defaults"

See if that helps.
