Right login data, but empty server list:

At my own computer Ren works fine.

At my wife's computer, I get an empty serverlist, but the login data are ok! Tested on my own computer.

Also ABP Gamma shows me: "connection problem" - and I get no serverlist.

This isn't a firewall issue, tried it which firewall turned off.  
Of course there is an working internet connection.

If I login to Ren, I get:

"Message of the day:  
Support: [xwis.net](#)  
Create your own nick at [xwis.net/cp](#)  
Server: Renegade  
SID: 0  
Nick: mynick"

Some weeks ago APB worked, yesterday I installed TT Patch.

The empty WOL/XWIS server list seems to be an issue with scripts 4.0, could you make a topic about this in the Tiberian Technologies forum? You might be able to help the devs.

Posted it there.

//

Edit: Solved the APB Problem with copying the woldata.key to

C:\Users\RR\AppData\Local\VirtualStore\Program Files (x86)\EA Games\Command & Conquer  
Die ersten 10 Jahre\Command & Conquer Renegade(tm)

but still no server list for Renegade 4.0

But from my point of view this is a problem with the serial number storage.

Solved.

HKEY\_CURRENT\_USER\Software\Westwood\Renegade\  
was missing!

Although it was inserted during installation....

HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node\Westwood\Renegade\  
was there.
