It is my pleasure after months of work here and there to bring to you the latest, greatest, and most stable version of Rene-Buddy yet!

Rene-Buddy 2!

Download Rene-Buddy 2, today!

This is a total re-write from the old beta :
http://www.renegadeforums.com/index.php?t=msg&th=35045
which does not function anymore.

Hopefully this will help keep people more in touch with the community, and help in the organization of more games

The settings features have been upgrade from an unstable INI system to a new XML format which should produce stabler results and faster speeds with large buddy lists. (100+)

The interface has been restyled, producing a sleeker look:
Toggle Spoiler

-

-

And like always, this is a beta, I will be adding new features and constantly updating.

Bugs:

- "Failed to remove mrspam". Array index seems not to allow 0 at blocklist.

- the program must be runned in admin mode, because you located the config file in program folder instead of user documents folder

- Game Listings is greyed out (due of beta, I guess)

//

A function to show ALL nicks registered at the given serial would be great

---

Depends on where you installed it. I put it on my desktop, it runs fine, I put it on my C:\ drive.. it runs fine... but if you put it in your Programfiles directory you will have to have admin access. The settings file resides right next to the application.

A function to show ALL nicks registered at the given serial would be great

not possible anymore, they disabled that from XWIS last time I tried.

Also I will fix that one bug.
