is it possible to load a single standard infantry with let's say 30 remote c4? i mean that an engy keeps on dropping c4 on that infantry unit until about 30 c4's. then for example on field when on NOD you go to the tunnels, run to the refinery from the tunnels entrance and when you stay next to the refinery out of sight from the AGT of course you typ blow and that engie blows all the remotes. i think that 30 remotes must destroy a building from the outside when you stay next to it . i do not know if this is working but i just made it up and i was wondering if it works or if people sometimes are using this strategy.if it works i got an new strategie i am going to use next weeks you can also use it at nodrefinery when you are gdi on field and nodpowerplant on under if it works of course
