You need gmax first, then you have to re-install the Renegade Tools (RenX is a plugin for gmax).

+ It doesn't "generate" maps for you. You have to make them your self.

Did you try using the -H command line like the error message suggests?

Question is, does Gmax itself work? If Gmax works you can try setting up a different 3d rendering. You should have selected Open GL as your Gmax driver setup when you were installing it. If you can't even open gmax though , id suggest you reinstall it and choose Open GL when your installing it.
