You need gmax first, then you have to re-install the Renegade Tools (RenX is a plugin for gmax).

+ It doesn't "generate" maps for you. You have to make them your self.

Did you try using the -H command line like the error message suggests?

Question is, does Gmax itself work? If Gmax works you can try setting up a different 3d rendering. You should have selected Open GL as your Gmax driver setup when you were installing it. If you can't even open gmax though, id suggest you reinstall it and choose Open GL when your installing it.
