Hey guy's for some reason i've got TT 4.0 to work on my other computer just fine but when i tried to install it on this computer it's crashing left and right.

I've just did a clean install of window's on this computer. I've updated everything. directx .net framework. I'm running Window's xp home edition SP3.

Now when i installed the game i went from 1.037, To scripts 2.9.2 test it and it worked, installed 3.4.4 tested and it worked, then i installed TT 4.0 and it said that it was 100% complete and everything even made me a icon on my desktop. Then when i went to launch the game this error pop's up and closes the game..

It should create a .dmp file in My Documents\Renegade\Client\debug\ whenever that message shows up. Can you please post upload that file? If there are multiple, please upload the most recent file ending with -r1 and any newer files (r2, r3, ..) if they exist.

All right yeah i see that folder and when i open it i see a whole lot of files

I Zipped them up into a zip file

<http://www.filedropper.com/crashdump20111105-011014-r4464-n1>

It won't let me upload on ere for some reason.

Their might be so many because i have un-installed and re-installed trying several diffrent times

It is a graphics issue. Can you try to run wwconfig.exe from your game folder and re-select your device driver. Then press OK and start Renegade. IF it still doesn't work, try running wwconfig.exe again and see if windowed mode works, or if selecting any other resolution works.
