As title says :- My server seems to be crashing quite often and its not producing a crashdump. I get the message saying Renegade has encountered an error etc.. I press close but nothing gets produced.

TT Beta 3.

If you get "Renegade has encountered an internal error and is unable to continue normally.", then it's almost certain that it generated a crashdump. Are you sure you are looking at the right location? <fds dir>/Renegade/FDS/debug

Is it in the VirtualStore directory then, if your FDS is installed somewhere inside Program Files and UAC is enabled?

The renegade FDS is installed onto a separate partition. I think these crashes are related with gsa support plugin however im not 100%. I have been debugging with Iran and I haven't had a crash since he gave me an updated version.

I will update this once I get a crash.

Your crash is related to the GSA plugin.

set NoWOLAppendPlayerCount to true
