Ever since I updated my server to the newest TT update I get this 3 times while my server starts up. Any fixes for it? I uninstalled everything (BR & FDS) then installed the new TT Server side update and still get this error.

More obvious is not possible...

You have the entry "NoGameplayPending" twice in your server.ini file under category "[Server]".

With other words, there is no TT error here but a config file error on your part.

Alright thanks! I didn't put an extra "NoGameplayPending", I just edit the settings (true, false, 1, 0, off, ect.). Took out the 2nd one listed, server started up normally!

THANKS

Also, was the moderators add/removing/athing fixed? I posted about the problem before and I was directed to jonwill, and told maybe the new update would have the fix(beta 3).

Again..also... I have to start up my server every 12-24hrs because it crashed, sometimes the BRenbot does also or BRenbot restarts automatically but in IRC the bot name is changed to

BOTNAME\_1 instead of the original name i chose for the bot BOTNAME

Thanks again
