Like the title says I am having trouble with LE it is the Tiberian Technologies 4.0 version. I have heard that it must have the correct install path or something but I am not exactly sure what the problem is. There are no presets or anything, and also I am running the First Decade version on Windows 7.

Thanks

In the Registry:
Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Westwood\Renegade\InstallPath
I believe the firstdecade forgot to add the (tm) to the path, not entirely sure.

Set it to something like:

C:\Program Files (x86)\EA\First Decade\Renegade(tm)\Game.exe
^ That's not the actual path for it but something like that... lol.. Just add the (tm) to it and make sure it points to Game.exe

If you still need help join [#mpf-ultraaow](http://irc.ultraaow.com) and talk to me..

Ah thanks, finally figured it out. This was the issue. The (tm) was there but it didn't have \Game.exe afterwards.

Awesome!

I'm making a Death Match map that only has a Bar and HON, it is an installation that is set inside a snowy cliffside.

I am getting an error message when trying to play in through renegade. I don't know if it makes a difference but I exported it as a .mix and am trying to play it on a single player LAN game.

It sends a renegade crash error like renegade cannot continue running. It happens on the load screen.
