I looked at my hosts file

```
# Copyright (c) 1993-2009 Microsoft Corp.
#
# This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
#
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
#
# For example:
#
# 102.54.94.97 rhino.acme.com # source server
# 38.25.63.10 x.acme.com # x client host

# localhost name resolution is handled within DNS itself.
# 127.0.0.1 localhost
# ::1 localhost
```

This is it. I cant add "127.0.0.1 localhost" below it i tried. But i dont have permission and i've tried giving myself permission. any help would be great!

I can't imagine why 127.0.0.1 wouldn't already be set to localhost, but that aside, are you not an admin on your PC?

I am admin for my computer that's why it puzzled me.

might as well post my OS since you'll most likely ask for it.

Windows 7 Premium 64Bit

open notepad as administrator.

then open with notepad C:\Windows\System32\drivers\etc\hosts
