After the update to beta 4 my LevelEdit no longer shows scripts in the dropdown menu on the scripts tab of a preset. Scripts already added to a preset appear in the list of the scripts attached to the preset, but when I select one to modify it or add a new one the list of available scripts is empty.

Do I have to manually add the scripts.dll to the LE folder like before? or is there a fix for this?

i think u need to add the scripts to the Scripts folder in LE as you said.

Btw, the Avatar u have, do you have the map still left?

It's kicking around somewhere. I can find it. It's not even near finished yet though. I may never end up actually finishing it due to potential copyright issues with Blizzard.

That's good to know. The map is presentable and mostly playable, though it can still use some work.

Putting the scripts in the mod folder in LE doesn't work either. Is anyone else having this problem?

I believe LevelEdit gets its scripts from tle.dll (le for LevelEdit) in your Renegade folder. That's

certainly how it seems for me. Are you using an original CD or The First Decade?

I am using an original CD. It always worked for me before since the initial scripts 4.0 release. It just stopped working since I updated to beta 4 this morning. Before scripts 4.0 I used the old LE with scripts.dll in LE, but now that doesn't work either.

Download the NEW 4.0 level editor from this website:
<http://www.tiberiantechologies.org/downloads>
It's in the mod tools, and includes a variety of extras that can benefit your map.

(God that sounded like a bot)

I tried the newest LE already. No dice.

did u bone all of the models yourself?

The turrets in the 1. Pic which look into the Air, do they hit properly?

I did bone them myself. The missile turrets don't always hit properly. Near as I can tell the bones are set properly, but it usually just shoots under a ship that is hovering right in front of it. The base defenses in the 2nd pic can easily hit ground targets, but they also shoot under things in the air.
