I have used MSDOS Command prompt many times in the past Hence my Nickname for what ever reason Using the achash.exe command to hash the maps and new maps for keys to add to anti cheat.ini I am getting a bad command interrupt as such that the command cannot understand the & in the string.

Such as for instance you want to add a string for C&C_Alpine.mix the & is throwing the command out as it is not interrupting the character is this a flaw in command prompt DOS I am not aware of or what?

So the question is if the above is true what is the remedy other than extracting the actual file from the .MIX and hashing the file.

Any ideas or answers would be appreciated.

It's because the & has a special meaning. You should use

achash "C&C_Map"

instead of

achash C&C_Map
