i got the little 4.0 beta 4 hot fix and played
i clicked to fire and heard a "Donk" Windows 7 noise that happens when you click outside of a box or something
the game had closed and my mouse had gone through and clicked on the desktop

i re-opened ren and rejoined and it pamsd me saying CD Authentication Error - Please Quit
i had gameplay pending and it kicked me out

now every time i try joining it does the same, and it's happening to more and more people in the same way

not sure what's wrong, but please help

This happened to me like two weeks ago. The problem resolved itself I think. Boy, everyone has been having problems with beta 4(crashing, fps drops, etc); I've only had any problems like the first two days and one time(the cd authentication problem). Maybe Lady Luck is on my side.

reborn made a plugin that stop the gamespy CD Authentication Error. Someone should make a new one for 4.0.

not caused by 4.0 client. Happens when server is in gsa mode.

Do people only get this error in non-4.0 servers?

I figured. And it only happens if the server is set to GSA mode.

Do the people that have this error happen to use a TDF serial (or no serial at all)?

EvilWhiteDragon wrote on Mon, 02 April 2012 00:59Do the people that have this error happen to use a TDF serial (or no serial at all)?

I would get this problem if I used my tdf serial before.

I get this issue with a serial from the original 2002 release. The first time I connect to a server

everything is fine, but if I connect again I get the CD key auth error, only happens with scripts 3.4.4 servers. I think it's an issue with scripts 3.4.4 server-side as everyone seems unable to join Jelly Marathon, so it doesn't look like a client-side scripts 4.0 issue.

Servers running 4.0 don't appear to have this issue, I checked it on one of Zunnie's servers and on the Atomix server.

Moving it out of the TT forums then, as it doesn't seem TT related.

I would get this problem if I used my tdf serial before.

He said IF he used it, which suggests that he isn't now; in which case it would still be a 4.0 issue.

As for trying to join a non-4.0 server with renlist and GSA tab, I can join fine without any problems.

hmm try this

thats all i can find. i don't remember if was a plugin or server.dat, not sure.

I know it doesn't matter anymore as xwis is back, but I got this error too, I changed my name and it oddly went away.
