Hi there

My Renegade doesn't work anymore as it should be.

I installed it a few weeks ago on my laptop and I did not have any problems.

Since I installed the TT beta thingy it kept on working like a week.

Then I went to another country with my laptop, came back and the game would keep on "Requesting Server List" and then say "Operation Timed Out".

After restarting the game, laptop etc I uninstalled the game and the TT thing.

Reinstalled the normal game but it keeps on saying the same things: "Requesting Server List" and "Operation Timed Out".

Can someone help me to fix this problem?

The XWIS network is currently broken and nobody can connect. There's nothing wrong on your end. As for when it will be fixed... nobody knows, there's just a deathly silence from the XWIS team as to when it will be back online.

Also, this doesn't belong in the RenGuard subforum as it doesn't look like you are using RenGuard (and even if you were it's not relevant to this issue).
