I've got it working btw i had changed the ip inside the plugin called ipbot.pm to
ipdb.danpaul88.co.uk n it connected fine.. thx wld1

I thought the plugin on the br website was updated :/

danpaul88 wrote on Thu, 19 August 2010 00:19

Open plugins/ipbot.pm in notepad

Find & Replace
Find: ipdb.tsulutions.com
Replace: ipdb.danpaul88.co.uk

This should cause TWO replacements in the file, save and reload BRenBot. I have only recently
redirected my own subdomain but the TTL is quite low so it should be up and running on that
address fairly quickly.

Future IPDB plugin updates will use this address to allow me to make changes as and when
required without relying on third parties.

So did I... the latest release of the plugin should indeed be the updated version.
