My game has been crashing every 5 minutes of getting in any server. Everything works fine until the crash. It says I lose connection and get the gameplay pending. So it might have been a 4.0 problem that randomly occurred. That or my system is just infected only for renegade

So i uninstalled everything and after I reinstall renegade it wont allow me to open it and I get this message

The procedure entry point  
?Detect\_Bandwidth @@YAKKKHAAHAACKPAUtBandtestSettingsStruct@@@Zcould not be located in the dynamic link library BandTest.dll.

Any help would be great and the quicker the better cause I need to play soon or I might have to kill someone in real life lol

I think that happens because you're using scripts without updating your game to v1.037, not sure though.

Sounds like you need to install v1.037, it comes with 4.0..

NOw i am back to my original problem of my renegade losing connection after every 5 minutes in game which i assume is due to 4.0.... now what?  
I have had beta4 since it came out and have never experienced any problems with 4.0 like everyone else has had. mine just randomly showed up 2 days and has been screwing my life

K I am officially up and running again with no 4.0 yet. Played for about 15 minutes no problem so i might leave it alone for a few days so i can enjoy renegade incase it messes up.
