It crashes in the RestoreWeaponsCharacterOnJoin.dll plugin while processing its gameover hook.

I cannot debug it further without the plugin's .pdb. (And it's probably one for the plugin author to fix anyway.)

My Visual Studio is refusing to load symbols for the DLL in your crashdump, it's only loading the symbols for 1/3rd of the plugins that you have installed that I also have the symbols for for some reason so I can't help with this.

I will get you a crash dump of just the one dll.

edit my test server is up and unlocked with the same settings as my aow but just with game spy support and restore weapons.

DarkSide Gaming Test: is the server name.
