Download: <http://www.multiplayerforums.com/index.php?/files/file/100-random-rotation/>

This plugin when loaded on the fds will randomize the rotation. Everytime the nextmap will be a random one.

The first map in rotation is not affected by this plugin so is always the same.

To load it on your server simply add it to your ssgm.ini [Plugins].

Disable brenbots !nextmap command by editing commands.xml and set enabled value to 0.

To see the nextmap type !nextmap or !next.
