I get an error as well with this new patch. I get to the part where it's negotiating port to the server lists, but that's all the farther it goes. If I go back and retry that, it crashes my renegade and freezes my desktop.

It's done so 3 times today. That is with using the regular Renegade, if I use Renlist I get in fine.

Perhaps XWIS is/was down again? The crash when going back and retrying is a known issue.

I don't think I've seen that before. Whatever though, it worked lastnight.
