Is anyone using my tutorials?

Is it worth continuing with them?

Has anyone done anything with the collision tutorial I posted the other day?

I have been using them

been using some of the new collision groups for sometime now.

I've used every one except the construction yard and collisions.. But I will be doing both soon... We have already developed one map with most of the items you wrote up and other on the way with the team visibility objects... we plan on having more! Some of our other mappers are in development of various maps.. one is even waiting on the naval yard tutorial to finish up his very excellent mini-mod map

I use them yes, nice work.

Much needed to for continueing to add more new interesting things into renegade.

Still waiting for the building restore thing though.

I'd like a tutorial on how to implement these if possible:

I assume you need another texture in the .mix for them to load from, but I can't find any documentation related to it.

Those only work if you are using the custom hud.ini hud, not if you are using the stock radar.

I glanced at the Hud.ini in my LE folder but I didn't really see any entries for it, sure its documented in there?

Nobody ever said it was documented, just that it needs some hud.ini changes. There isn't much documentation for a lot of things in 4.x, but you could try looking at custom hud.ini files that others have made to compare.

I recommend documenting anything you want people to use, its a pain in the butt to find a mod that does something, then have to dig through their data files to see how they do it (assuming you can even guess what files they do it in). As an additional deterrent there is always the chance that that mod might have some special code that won't work for Ren so the whole thing is just a big waste of time.

But anyways, I dug through APB's HUD.ini because I figured if anyone used it would be them, but it only looks like they have 5 entries so I doubt they make use of it:

```
BlipTexture=radarblips.tga  
RadarBlip0Top=0  
RadarBlip0Left=0  
RadarBlip1Top=0  
RadarBlip1Left=8
```

```
...  
RadarBlipColor0=2  
RadarBlipColor1=9
```

```
...
```

So I guess it might be possible that the extra blips are numbers 6-14, but I kind of feel like I've

already wasted enough time.

So instead I would like to request documentation (or at least a listing) of all the possible keywords in hud.ini (I know a lot of them have been listed over the years, but I've forgotten most, and I see plenty in APB's that I never remember seeing before).

I recommend documenting anything you want people to use

Preeching to the choir there... I've been pushing for documentation for lots of things but it's slow going and there is a heck of a lot of legacy stuff with little to no documentation available. I'll look into doing something for hud.ini keywords but it basically involves me finding where they are used in the code to figure out what it looks like they're probably doing

Most of the relavent code for the stuff in hud.ini should be in shaderhud.cpp

yeah, I've started working on some documentation for hud.ini keywords and will do tt.ini next but it'll take some time.
