hi.

does such a script exist? because i just cant find one at all.

I just want a 2D sound effect file to be played when a person dies ONLY to the person that died, not to anyone else.

my eyes are bleeding staring at the scripts listing.

Not that I can see. Might be able to do something with JFW_Death_Play_Cinematic and use the cinematics system to provide the sound effect.

http://www.danpaul88.co.uk/ttdocs/page_cinematics.html

Assuming the script passes the ID of the person who died anyway... don't know if it does or not without looking at the code.
