when i install the Scripts.dll 4.1 the game works fine but when it updated to 4.2. I start came and connect to a room, I sporn in-game and keyboard and mouse don't work and have to remove scrips to play (not even ESC works) i am running vista and 17 in one download from origin and with out these scrips im missing some maps so can play some games but when room changes to next map get kicked can i get maps without scrips until problem resolved

I think if you delete config.dat from Documents\Renegade\Client and restart Renegade it will regenerate the file and resets the controls. (not 100% sure so make a backup copy)
