This is a very simple SSGM plugin that allows you to check your ping or check other players' pings.

[Plugins]  
00=BanSystem.dll  
01=Mute.dll  
02=Ping.dll

You can replace this construction:  
"Find\_Player(Get\_Player\_Name\_By\_ID(PlayerID))->Get\_GameObj();" with this  
"Get\_GameObj(PlayerID)". Which is also fail-safe and a shorter line

EDIT:  
also im pretty sure Get\_Player\_Name\_By\_ID causes a memory leak. because it creates a new char array and probably uses WideCharToChar engine call.

also im pretty sure Get\_Player\_Name\_By\_ID causes a memory leak. because it creates a new char array and probably uses WideCharToChar engine call.

It does. You're better off using something like

```
GameObject *sender = Get_GameObj(PlayerID);  
Get_Wide_Player_Name(sender));
```

also im pretty sure Get\_Player\_Name\_By\_ID causes a memory leak. becouse it creates a new  
char array and probably uses WideCharToChar engine call.

It does. You're better off using something like

```
GameObject *sender = Get_GameObj(PlayerID);  
Get_Wide_Player_Name(sender);
```

Fixed, re-uploaded, and thanks for the advice.
