I would like to thank Jerad2142 and Daniel Blaney for their contributions to 4.4 (If I missed anyone else who contributed to 4.4, sorry)

Full list of changes made since scripts 4.4 was released:
* New and improved scripts from Jerad
* New and improved scripts from Dblaney
* Small fix to TextFileClass
* New engine call Set_Camera_Host_Network and various related fixes to make it work properly
* A fix to the targeting code to solve an issue with certain AI scripts

If you are running 4.4 (or any earlier version) you will be automatically updated to 4.5.

People wanting a full installer, a server download or a tools download can find them on the Tiberian Technologies website (www.tiberiantechnologies.org) in the downloads section.

People who need DA will have to wait for a 4.5 compatible version of DA to be released.

If anyone is interested, I can port DA to 4.5 and post it. I have my local copy already ported. Shouldn't be too much work to port over the unmodified 1.91 release which is still on 4.3.

If you have free time can you do that? Thanks

Please do that as I'm warping around all over the place while jumping on MPF and RenCorner.

Doesn't DA come with private hooking DLL without source code though? I assume you have the code via TT?

I don't have the source to da.dll but nothing it hooks changed between 4.3 and 4.5 so it works fine.

Dragonade for scripts 4.5 is now available to download here. Make sure you update your fds's

bandtest.dll and other server bits to the 4.5 versions on the TT website.
