Forgive my ignorance, but I've been going over the character stats on the old wiki and noticed:

The GDI soldier's rifle does a little more damage than Nod's. GDI's does 7 damage to body, 35 head shot. Nod's does 5 damage to body, 25 to head.

If you damage a Nod Rocket Soldier Officer, you don't get any points (whereas you get 0.050 points if you damage a GDI Rocket Solider Office)

Have these ever been patched?

The first was never patched for sure. I think this was intended, the renegade installer even refers to the fact the gdi soldier has better training than the nod soldier. It may be to make up for nod having the better early game tanks and SBH.

Not only that, but the nod soldier also has a bigger head and the nod shotgunner has a... king-sized body :biggrin:

You are correct concerning the head-size however this is not as big as it might seem. Hitbox is only marginally bigger.

Do keep in mind that the nod soldier is actually shorter and more narrow than the GDI soldier

Which results in this:

Here is a side view with a slight forward offset so you can see where the boots align and all that good jazz:
