Work is being done to make Scripts 4.x work with the new 1.038 patch for Renegade that was recently released (including providing an update for people who have older versions of the game so they get the 1.038 patch fixes and changes in a way that works without Steam/EA App as well as working correctly with the Steam Workshop support for those who have the Steam version) but it will take time (mostly because Unstoppable is busy and has no time to do his part of the work)
