That's because they just moved our shell to a different server. It will take about a day for DNS to propagate, so in the meantime, type;

```
/server 207.44.173.31
```

in the Status window of mIRC to connect to the server if you're getting a "Connection Refused" error.

Those of you who use the Java applet at <http://www.n00bstories.com/irc.php> -- I've updated it so you should have no problem getting online.

Argh... more difficulties... we will be back to the old server momentarily. Sorry for the inconveniences this week.
