Um, you're better off using pure PHP coding, PHP-Nuke has a lot of security issues, use PostNuke, if you really want to use a CMS

Sir Phoenixx>----> <http://www.phpnuke.org> <----<

Not quite what i'm looking for. i need a readme to tell me how to setup the themes (and the entire site), cause for some odd reason, the good themes have no little read-me, whatsoever.

You can use my Site control script once its done, basicly just like PHP Nuke but user friendly and

Easiest setup you can get, just basicly dump onto the FTP and its ready to go!!!

AprimePHPNuke sucks , period.

And why does it suck? What, no reason? That's what I thought, why don't you go try to raise your post count somewhere else.

There's a readme file in PHP-Nuke, upload it go to config.php type in your MySQL information. go to <yoursite.com><yourPHPNukedirectory(ifthereisone>/index.php create the superuser go to admin.php login change the themes under preferences, and the site general information.

The end, doesn't get much easier.

Why don't you ask help incase of downloading some pre-made n00bish script?
I'm ain't trying to raise my post count, there shouldn't be any post counts anyways.

Some sites are using it well *they're using it as a portal* , but some make it look really bad.

I agree. It takes a little bit of effort to make the PHP-Nuke and PostNuke sites not look plain and not look like hundreds of other sites out there already. They are pretty much good for one thing only and that is getting a functioning website up with little time or effort. But then again, not everyone can code his or her own site. Its a place to start.

Your the one to talk eh?

If you want to post something negative about some, theres a function called "Private Messages", maybe you should give it a go someday?

I'm not using a Premade "n00bish" script. i bookmarked a site that tells you how to get started!
the rest is up to me (Themes, etc.)

P.S. - Can someone tell me where to get a better Forum theme than subSilver

Xtrm2Matt

Your the one to talk eh?

Yes I am. I have no need to raise my post count, and I have never spammed, having a post count higher then you doesn't equal spam, this is what some of you ignorant little children need to learn. His post was nothing but SPAM, very little to do with the topic.

Xtrm2MattIf you want to post something negative about some, theres a function called "Private Messages", maybe you should give it a go someday?

Maybe you should go back and actually read this thread? But that would be asking WAY too much. :rolleyes: Since when is stating that his reply was merely spam and nothing else, and that there is no reason why php-nuke 'sucks'

The forums that come with phpnuke suck. (Splatt)

You can get the phpbb to phpnuke port of phpbb from <http://bbtonuke.sourceforge.net/>
