Some of you dont seem to understand me lol

I want a tutorial that shows me how to create a weapon or a vehicle (from a blank page in renx, to a gun i have modelled myself), but I cannot find one. Plz, do you know where there is one? I really want to get into modelling but I only know the basic functions of RenX. It would be good if someone could show me the steps they went through to build their own model from scratch, such as the beretta or that uzi thing. Thanx!

PLus I have a new site for my clan, S\*o\*D
