I just realised that my GDI Power Plant didn't have any collision settings so I went back to RenX to fix it. The strange thing is that the settings are already set, I then redone them and exported. Went back into the game and the same problem, when firing at it with a steal projectile, no bullet holes appear or burn marks from other weapons. This seems to be a problem for the whole building.

Take it off the default material, set it on anything but that. Default gives no bullet decal\sound.
