Hi all, I'm trying to skin a few vehicles but all of the tutorials I've read miss crucial details and don't work lol. :rolleyes:

It's pretty much the uvw unwrap bit I'm not getting. And then how d'you actually stick the texture on once you've done it? I managed to make one and stick it on using the "M" key method but it didnt fit the vehicle hehe

One tutorial said to click the material editor button in the top right (that red ball thingy) but when i do nothing happens, even when its not sunday.
Any ideas?

Thanks,
Toasty

I don't want to sound rude, but learning chilliskinner is a waste of time. chilli can only handle basic models. I used it too, but I've deleted it. You can better use the one from madtone, you can find it in the tutorial topic.
It's kinda hard to learn, but it's a very good tutorial, and it's better than that chilliskinner.

Or try the UVW one on http://www.laeubi.de/tutorials or http://www.renhelp.co.uk
(its a bit absic and not that good like Madtones but easy to learn)

As far as it fitting your vehicles, use the gizmo button to make it fit, I don't do skins, but fitting textures to a model applies to all models I believe.
