me and my step father love to play ra2 and we both just got renegade about a month ago, we like it even more--unfortunatley for some reason when we try to host a game it ends up the same no matter which of us hosts the game we get stuck on the gameplay pending and our game never starts, we can play a quick match game or find a game already hosted that can fit 2 more players but due to our lack of experience it ruins our fun to get blown away over and over again, we would like to play together with my brothers without the anihalation of ourselves by more experienced gung ho players. we've tried gamespy and get the same problem. when we host we can see the other player enter the game (i.e. nod 1 gdi 1) but it still just goes nowhere. is it not as easy as clicking host game and setting it up?
