I would like to know everyone's Planetside station name so that I and other players could get in touch and make squads if we happen to be on the same side and server.

Server planet - Markov
Side - Terran Republic
Outfit: Nerv
Leader: ACE

Don't post adverts for Planetside members here. If you want to start an outfit then advertise in the game where there are people actually have the game. No offence but this isn't the place to be doing this. However if you want to play with some of the members from here then there is the RenEvoEpoch outfit on Konroid led by Dante. I'm sure your more than welcome to join if you ask. There are around 6 or so from Renegade in the outfit and we have the second highest number of outfit members on the server so there's normally a lot of us online.

Server: Konroid
Empire: Terran Republic
Outfit: RenEvoEpoch
Leader: Dante

Please report this elsewhere. These are RENEGADE forums. Go post this in the planetside forums.

You dont go into a video store and ask where they keep their lingerie do you?

In closing

Just get 25k Outfit points and you get a free Radeon 9700 better than 3 months free. By the way did you get a month free with the game when you bought it? Somone reported a version with 3 months but I don't know if it cost more, would have thought it would be some in-store deal though.

I posted here becuase many people I know here would respond, this is the only game forum I go to, this is the only community I am familiar with, i have a couple other online games such as half-life, but I don't play it, I don't feel like searching for fellow Renegade members in a game forum that probably has thousands of members. Thanks for your defence Deth, falconxl, and thankyou for the offer General Havoc, but i'm alread outfitted to the Nerv clan
<http://www.thenerveclan.com>

Also would like to know if anyone here plays WET (Wolfenstien Enemy Territory) since a lot of my clan members in Renegade say it is a pretty good game. When i get it my name should be fosaken or kamadaki1

I also play MOHAA and MOHAA spearhead on GS my name there is element and to find the right element my name is Zach Hart.

And for you who are so uptight loosen up, and cool down I know some of you are just so anxious to try out your new catchy pics, but don't post them here please save them for a thread were they are more needed.

What about video cards, do you think the Radeon 7500 could handle it? That's what I plan on buying sometime soon.

pretty sure i have this card i have never heard of and get around 30fps on renegade and i can handle PS alright, but on PS i put it on recommended where it measures how much detailed the graphics have depending on how fast your card goes, when it's on high you can see grass and flowers and stuff, it is pretty neat engine, you just need a kick ass comp and vid card

I can get 85 fps max on Ren (Maxed Settings), on PS I get 120-130 max (Maxed Settings) with my Radeon 9700 Pro. The 7500 should run it without problem. I ran it on my Geforce 3 without problem.
