Just downloaded the nvidia Stereo Drivers. I was looking for an obsolete program called "eyeSCREAM light" to see if I could get stereo vision to work in a game. I then saw the nvidia drivers that offer stereo vision for their LCD glasses but they also support red-cyan Anaglyph glasses. I tryed it in Renegade and I was quite impressed. Although it does take getting used to before you can use it in full mode it is quite good to play in this mode. Although it may not be playable online it really makes the game look like your in it and I was inpressed.

Have a play around with the drivers if you have a pair of red-cyan or red-green glasses around.

What the heck is in the center of that screenshot?

And what about the HUD and the stuff that isn't in 3D, do they look weird with the glasses?
