To all the naysayers on my recent post and now the post of sloppyjo - I say this... I really hope you are right about there being no aimbot or cheat for renegade. Cause I love playing it and hope to continue. But I really find it funny that another person had a similar experience to mine (a person I have never met or talked to.) I hope it is a coincidence and nothing else. Because from what I seen, when standard infantry start killing 10 people in seconds - it will ruin the game. So you can make jokes about, deny and attempt to explain away my and now sloppyjo's experience with basic infantry going on killing sprees. Hopefully I am full of shit, on crack and a complete liar about my run in with a possible cheat - and this game will live on. But if it is true, and myself and sloppyjo actually had a run in with a cheat - do you think the game will be fun when a standard infantry soldier can kill 10 people in seconds????

I already heard it was lag

I already heard people say they can kill 10 people in seconds with no problem.

I already heard I am full of shit

I already heard take a screen shot and prove no lag.

I already heard my computer sucks.

I already heard I am a noob for screaming aimbot and cheat.

So don't bother responding with those - you would be wasting your time.

I'm just sorry I wasn't in that game. The moment I would hear you crying aimbot and the like, I'd have a picture of you saying it, and you'd be placed along my VAST collection of people crying when they can't match the skill of someone else.

Java, as far as adding me to your collection..... how old are you? Kirbys response made me laugh (like most of his post) your response made me ill. Please add me to your collection of people... just add it now... do you think I care. And I did not scream aimbot. Where in my post did I say I screamed aimbot. All I simply referred to was the possibility of there being a cheat. Please take the time to actually read post before responding. Further, you do better with humor, stick to that. about someone cheating. I don't care if it was your own idle speculation, making a thread on it is just as bad as accusing someone ingame of cheating.

Maybe my impression of use of these boards is different than yours. I think one of the reasons for this boards existance is to keep the game of renegade strong. I have no idea what happened to counter-strike but from reading past post, it was ruined by cheats and such. I don't want that to happened to renegade. So, my reason for posting what you percieve to be whining is actually about raising awareness about the POSSIBILTY a cheat exist. It was never to whine about getting owned in a game. Hell java I have been killed in this game over and over and over many times by many people. I never screamed aimbot once. It is obvious to me that you are sick and tired of people doing that when a skilled sniper makes kills. I understand that. But my point is only to raise awareness that a cheat may exist now.

actually, someone named sloppyjo posted of a similar experiece. I let my original post of cheat or not a cheat die at it being described as lag. I was satisfied with that. However, than i read sloppyjo's post which was very similar to what happened to me. That is why I created this post. Listen... EVEN IF an aimbot existed, it would not have the same effect on Renegade as it does on CS. CS is all about shooting. Renegade is about destroying bases. Aimbot does no good against a tank. Aimbot does no good if you're in a tank (ya gotta LEAD the target). Aimbot does no good when you're in the field and an APC runs to the power plant full of techs and you can't see them in there to kill them.

Yes, an aimbot would probably kill off snipe-only servers. That's about it. And our tactics in-game would change drastically... but, overall... once we stopped running into the field because we know the sniper WILL get us, they will get bored of having no kills and stop.

That being said, I still ain't seen no aimbot that actually works. I've seen two... both are color-based, and even with the color heads added, you still have to aim. It's a clickbot, and nearly useless... not worth the trouble, really.

So you're saying that when I get inside the wall in a given map, thats using a cheat. Actually, thats a game flaw, and what I'm doing is an exploit. LOL... Still trying to justify your cheating?

It's a glitch, a flaw, and you exploit it so you can have the advantage over the others in the game, exploiting it is cheating.

If there was a glitch in Renegade, that when properly exploited, made the "hit zones" of the enemy soldiers enlarge, and made it incredibly easy to get a headshot without aiming, and someone used that exploit to get headshots just by pointing the screen in their general direction. According to you, he wouldn't be cheating at all, and this would be perfectly alright. Hey, he's just "utilizing something in game" (insert some more of your stupid reasons to justify your cheating, here).

Granted, I can see why you would call it cheating, but you're not using a program which is defined to do a certain task, such as the Clickbots. Mr. Aircraftkiller has still shown no proof that such a program exists for the wallhack he's been claiming to exist.

Nope. Thats a hypothetical exploit, not a cheat. The person you state was merely exploiting a flaw in the game (hypothetical) which could be used by anyone at any time should they know your exploit. Something tells me, that just with B2B, which was an exploit (because it was never intended), or the OB walk, that when people become aware of these exploits, they are able to use them at their own discretion. It's not cheating if everyone is using it, it's common practice.

And General Havoc: This is the case of you, Aircraftkiller, and everyone else who denies to show any proof of these "cheats". You say something exists, you provide no proof but "Trust me, blah blah blah, I'm Mr. Righteous, put blind faith into me because I say so". I'm sorry, but I'm not one to put faith into someone I've never met or spoken to. I'm just that skeptical that any of these "cheats" exist.

I'm not trying to go against you on this, but I'm not going to succumb to what you say, especially when you deny the public any evidence to support your claims. O right, so the more people know about it, the more true it becomes? Yeah that makes sense. People following the opinion of someone who seems to be higher than others (in this case, ACK) makes no difference whatsoever to the argument and is pointless mentioning with little relevancy. Loads of people will think ACK is right on this subject. A lot of people won't. This doesn't change the fact that I have been thinking too heard and totally forgotten what I was about to put.....

XXX are u sure cause making a wallhack is really really easy he just changes the textures on his own machine so he can simply look trough them that takes unbelievable 5 minutes

now to the part with shooting through walls since he would hav to change the map that for he would have to hack NNs or at least code a progie which does that for him because the game would definately run outta sync and he would get his ass slammed by the server - for real i dont think XXXXX is that good he talks alot and he thinks hes the best and i dont even think he wrote that progie i find renegade hacks from time to time but most have trojans or virusses in the executable now it takes something more than a script kiddie to make a working wallhack which

works through wall (shooting) maybe its just an exploit but then someone would have figured out - seriously XXXXX aint the guy who is ale to code something like that...

Wallhack only allows you to see Objects through walls, such as Other players, Harvesters, tanks, Tiberium Crystals, Lamposts, Barrels, Trees etc..

you cannot shoot through walls with a Wallhack, although from its name it sounds like you can, and thats the confusing part about the wallhack programs, it depends on the game in question, but Soldier Of Fortunes Model Files (all the character, weapons & other Objects ingame) could be seen through a wall, perhaps someone has coded a program that allows you to see W3D files (Renegades object File Format) through walls. its possible... and if XXXXX has it, GOOD he should be banned for it!

its true, after downloading the maps from XXXXXXXXXXXX website and after some tests, we came to the conclusion XXXXX was INFACT cheating on not just our server, but every single server he has ever been to!

i have now removed these modified maps and i will continue to play normally.

As most of you guys know, I am a programmer. I am currently collecting information about preventing the wall hack from happening. I have came up with an idea, but that means the FDS needs to be modified in some fashion. I am currently designing some things and collecting information.

Also, I ran tests on the maps XXXXXXXXX is spreading. When I make a CRC32 of the map myself, those are different then the CRC32 of the original maps. So, now I need to write an app that sends the CRC to the server and have the server kick players that haven't sent their CRC value.

hmm... that means the renegade game should send ure script the crc32? u can make the game send u other informations than the game data itself?

Darkeye 35Quote:It's a glitch, a flaw, and you exploit it so you can have the advantage over the others in the game, exploiting it is cheating.

So everyone has the potential to do the same thing. Therefore it isnt cheating. If it is possible for everyone to do it- whether they know about it or not- It isnt cheating.

Everyone still has the potential to download a clickbot/colorbot/etc. and use those ingame. According to what you said, using a clickbot/colorbot/etc. isn't cheating at all. Hey, if it's possible for everyone to download a bot and use it- whether they know about it or not- It isn't cheating.
:rolleyes:

And, according to you, if someone made a truly functional and working aimbot, and put it where everyone can download it, and everyone could possibly download and use it, it wouldn't be cheating to use the aimbot.

Ah, but thats where it gets tricky. You see, that would be using a program built outside the Renegade game to interact and effect the gameplay. Thats not an exploit where people can readily use at their own description ingame. No my friend, thats a program used externally to create variables in the game which wouldn't be there even in an exploit. And don't try and pull some hypothetical bullshit such as "Yeah, what if there was an expliot which made it so you automatically fire on the enemy's head", because that arguement holds no grounds since it doesn't exist anyway in Renegade.
