Whenever I am downloading a file over 10mb in size my download will randomly stop and wont start again. I checked my antivirus and there are no viruses. I have tried downloading various file froms various sites and every one over 10 mb will stop.

It doesnt neccessarily stop AT 10mb though.

Anyone have any ideas why my downloads are stopping?

(I have recently installed a router, Which is when the problem seems to have started happening)

Ok I did some tests. I took off the router and it STILL happened.

So it is not the router. Please dont be a smartass unless your 100% sure
