Hi there. I am in big need of some help. What is the file name for the laser chain gun and laser rifle's laser beam?

I have SO badly been wanting to change the color of the laser beam.

I have not seen any skins to do so.

So I am going to try and skin it myself.

There are settings for the beam color give in an X Y Z setting but I don't think it is RGB. Play around with the settings and see what you get.

I have recently been searching for a laser beam w3d. No luck yet.

And what do you mean by settings?

And how would I even edit this for xyz coordinates. Why would that change its color anyway?

Yeah it seems strange but it says Beam Color: X= Y= Z= I don't know if it is a mistake or what but it does change its color. Ask [REHT]Spirit, he will say the same too. You can find this setting under Munitions > Ammo > LaserChainGun It's on the settings tab when you click "mod" The W3d has no apparent effect on the color of the beam for some reason. Try numbers like X=142 Y= 12 Z=909 or something and play around with them.

I found something that might be the file. But photoshop wont open DDS files!

You know of a program that can read and edit dds files?

By the way. What do you mean "Settings Tab". If you mean level edit I dont want to use it in a mod I just want it to be a normal skin

Photoshop with the DDS plugin. Trust me that file won't do it. It is a coded color, ask Dante as he was the one who changed the lasers color before a few months ago.

Great. So theres no way to change the laser color without using a mod.

I wanted to use it online as a regular skin.

How do I ask dante?

Anyone know his email address?

And how do I temp something?

Sorry its just that the only thing modwise I have ever done is drop scripting

Oh wait.

I found it on the level editor.

So after I temp it what do I do with it?

Are you sure this will allow the beam color to be used online?

EDIT: Never mind I've given up
