I just saw a preview for renegade(old, obviously) on mtv, on the show electric playground. It made renegade look so awesome. Now I know How this game sold so well, they advertised it on this show with all the old models. Everything looked totaly awesome on this, the old chaingun was amazing, the old rocket launch kicked ass, the nod light tank's turret was not cetered and it looked cooler. I've see the recon bike, nod buggy, flame tank, and all the other ones that were posted on here, but i couldn't help being pissed off at EA, for advertising the with all the wicked models, and then realeasing it with all the shitty models: Suck my balls EA.

anyway, did anyone else see this? I know it's old so sumone is bound to have seen it.

So, basicly you're saying that Renegade sucks?

Look dude, they took 5 fucking years to devlop this game, they had to make it meet the year's standards and all...

But there's only 1 guy to blame for this, and I don't remember his name, he joined the team and decided the remake the whole game, which was the worse idea ever.

So stop blamming EA for everything, EA is a company, they need to pay their employees with the money we put in their games, if they aren't making any money, they move on, just like any other freakin' companies.

Now you're going to say: But Westwood was different!

My awnser is simple: Of course it was! They were owned by Virgin before! And Virgin has a different mentality which is: If you don't like what you do, you shouldn't be here

No way! I don't think renegade sucks! It was my favorite game fore about 5 months staight. But then i got sick of it. I was wondering what came over them, to totaly fuck up the models and all, but I guess if what you say is true, then now I can blame that dude. also, I know it took a long time to make the game, didn't it take a good 2 or 3 year to creat the engine itself?

In conclusion: suck my balls EA

TaximesI remember downloading those movies when they were new....

Like the old buggy one, and the one where Havoc went in the church and they were boasting "seamless environment transitions".

I have the low quality version of that on my PC, along with a high quality movie of the old commando running around the base with a horrible running animation. I'd upload them if I had somewhere to do so, ModX seems to be down right now...

Wow, I was just reading through the Penny Arcade archives and just happened to stumble upon a news post that contains information from when they say Renegade at E3...I figured it belonged in this thread mostly.

Quote:

Command & Conquer - Renegade: The night before E3, I tried (however unsuccessfully) to enamor Gabe with this game. He's one of very few people I know who hates Command & Conquer as a hard and fast rule, principally because his great grandmother died in a freak accident while commanding and conquering one year on the roof. He's never really gotten over it. Since this game was almost directly inside the doors though, he couldn't exactly avoid looking at it. Graphically, the game looks better than I had even expected - and (at least in the areas I was privy too) scripted events were used to create the atmosphere of a conflict much bigger than your one character. I wasn't sure how they'd communicate that you were in the middle of a full-on game of C&C, but I should have just taken them at their word. The man giving the demo did everything in his power to hammer home the fact that the game operates very much along the lines drawn in its Real-Time Strategy predecessors. Let me give an example of what he means:

He came up over a ridge, and below and engineer ran frantically back and forth between two turrets on the shore, keeping a group of destroyers at bay. You could see these massive ships in the distance, firing on targets out of your line of sight. After dealing with the engineer, the person showing off the game destroyed the big guns on the shore with C4 (a more than familiar tactic) which in turn allowed two allied watercraft to pull up, one full of troops and the other full of a drivable tank. In fact, you'll be able to (ahem) Command many of the vehicles people associate with the C&C Universe in the single player campaign - as well as take a look inside the now legendary structures. What's even more intriguing is that the multiplayer component should play out like a team-based action/strategy game, the classic play shifted in scale to make each player an individual unit. Understandably, the guy showing things off wasn't at liberty to discuss many specifics about it yet. I'll say this, though: The commando planted a beacon for the Ion Cannon - a gun so big, they had to put it in space - and a shaft of white fire fell from the sky like God's middle finger. It was always fabulous to molest your opponents via a powerful orbital platform, but to see that evil column of hate from first person satisfied like a hot meal.
