I have now finished my Mammoth Tank and went to test it in Ren. I just replaced the original Mammoth Tank with my one so I can use the same settings. I now find when in game, I cannot enter the vehicle. The transition is set and the settings are used from the original Mammoth Tank so I have changed nothing.

Make sure your W3d settings on the Model are set to "projectile"!
If you using the old ones setting check the seat number and Vechile Transistions.

I have checked all of the collision settings, they're correct and the seats bones are in place, "Seat0" and "Seat1". I also checked the settings in Level Edit, them all seem fine.
