hi crimson, or anyother admins that can help me.

I was wondering this new rengaurd program, can anyone use it?
I would like to use it for my server. my server that I started is new to the commuinity. but still trying to come up a better name for it.

What's rengaurd?

Thought it was RenGuard

Saddly, RenGuard isn't out yet, but still, thanks for asking and for giving this community another server!

General HavocNow only if there was a program called n00bguard...

rofl.... now that thing would be firing off like nobodys business

Crimson has a page ready for RenGuard though I believe.

Hope it's not to far away.

Edit:

CrimsonIt will be <http://www.renguard.com> but I'm still waiting for DNS to propagate and the site just says "renguard.com" right now.
