z310how do i links another persons banner to like...here

If you have access to the site and are an admin there than all you do is what i said above now if you want to take another sites banner and put it somewhere else you just save it then do as i said above. if its just a site you go too like if you wanted to go to n00bstories and make there banner link here instead of to the noob stories home page then u cant. hope i helped not really sure try to post exactly what ur doin then i can give step by step instructions to ya

Dude, he wants to put a banner image in his signature.

Ok...

1. Geocities doesn't allow other sites to link to images hosted by them.
2. Find another site, like the n00bstories image viewer, just register for n00bstories and you'll be able to use it.
3. To create an image for your signature, just paste the entire URL (for example: http://www.somesite.com/image.jpg) into the signature, and put the BBCode img tag in front of it, and the ending img tag behind it and save it.

z310thanx now how do i link it??

To link it you use: img]http://Link of image from your website [/img[/URL]

But without the spaces and with the brackets on the img tags..

To link your image:

Just replace the url with the url and location of your site and image.
