Since now i have troubles with renegade MP games
i don't get any points and i don't kill anyone
evrywhere he is laggy
anyone an solution for this

some solutions that i tried:
beat it with an hammer
throw it out of the window
restarted
nothing worked

you have the zero bug. it should go away if you restart the game but if you did that then restart the computer. if that doesnt work then i guess reinstall. but dont listen to me im just a player. get a second opinion before you trust me.

I second that skater, and also some mod or something might be lagging you up as well as giving you the 0 bug.

What I suggest you do is first of all re-install Renegade.

Next, minimize the stuff you run whilst playing Renegade. Hit ctrl + all + delete after a fresh PC Restart, end all tasks except explorer and systray.

Next of all, tell me what video card you're using. There are different ways to check the settings on video cards and I think some setting you've done is lagging up. I found anti-aliasing really fps drained my old card up... tell me, is it actual lag your getting or FPS (Frames Per Second) cuts or slowdowns? By lag I mean high pings and michael-jackson style moonwalking along the floor and lagging into poles/ etc.

It's a good idea to add a lot of relevant detail to your first post so that a solution can be brought quicker.
