Hi! I have successfully setup and gotten the LFDS to run under Redhat 9. I have downloaded the telnet wrapper software, and gotten it to successfully startup. After it starts, it fires up the LFDS, as it should. . . all seems well. I then telnet to it and get it's message saying to input my password. . . and that's where the problem is: no matter what password I put in from the server.ini file, the wrapper always tells me it's the wrong one. I've tried using what I set RemoteAdminPassword to, as well as every other password in the file. . . no luck on any of them. Is there something obvious I'm missing?

Here's my server.ini file, sans commens:

```
Quote:[Server]
Config = svrcfg_cnc.ini
GameType = GameSpy
Nickname = WESTWOOD
Password = WESTWOOD
Serial = WESTWOOD
LoginServer =
Port = 0
GameSpyGamePort = 4848
GameSpyQueryPort = 23500
BandwidthUp = 4000000
NetUpdateRate = 10
AllowRemoteAdmin = true
RemoteAdminPassword=westwood
RemoteAdminPort = 5555
```

Any help would be appreciated, thanks!

Put a space between the =

```
RemoteAdminPassword = westwood
```

That should work.

Thanks for the tip, I do appreciate it!

Unfortunately, I tried it, and the extra space or two made no difference--it still doesn't recognize any password I type, whether it be the regular password or the RemoteAdminPassword.

Still looking for the problem. . .

Thanks again,

--Woodrow

Send me your config files as a fileattachment to my email address (see README) and I will take a look..

Just in case anyone else has the same problem, with mac's help we found the problem, and fixed it. . .

The problem was that I had edited the config files on a PC before uploading them to my Linux box, and so every line of the files had the Windows end-of-line character, instead of the Linux one. A quick pass through dos2unix made it all better.
