I looked in the renegade directory where is suposed to be but its not there. So I opened up the xcc mixer and found a copy of the scripts file and I went to extract it to the directory on a hunch, and it says it already exists and do you want to overwrite it So why cant I see the file?!

Assuming you installed to the suggested path

Open
C:\Westwood\Renegade

And look for Scripts.dll.

EDIT:

Ok I can't find it in my RENEGADE folder either. I have an idea though. I think uninstalling renalert messes it up.

EDIT: Ok it was a mistake. I meant to say renegade folder

<>

...

It's in the RENEGADE directory, NOT THE DATA DIRECTORY.

You even clearly labeled "C:\Westwood\Renegade" yet you talk about the data directory?? :rolleyes:

Its a DLL file,they are system files,so they are hidden,use that option to make all System/Hidden files seenable.
