Just in case you're interested, I coded a boring little feature on n00bstories.com.

<http://www.n00bstories.com/graffiti.php>

It's basically a place to type random crap in your choice of colors. I've seen them before in other places and thought I'd see how it does here, just for the heck of it.

Bah, it didn't accept <0_0>

It did accept --> though

It's coded to strip HTML tags, which are all between < > brackets, to prevent abuse and exploits.

They are randomly spaced. It's supposed to give the impression of random scrawlings on a wall
