I know n00bstories, rewars, any my server [UN] Default Maps, run wolspy, but it never updates the status of the server in gamespy. e.g. once it starts, after the intial "heartbeat sent to gamespy" it does not send any updates to gamespy. The only way to get it to update information on gamespy is to close wolspy and start it up again.

I have seen this problem on all 3 wolspy servers, does anyone have a fix?

I am also running Br.net btw, so do you think this might be causing the problem?
