I think it would be nice to have a sticky saying what u can run on a linux server and whatnot...I'm unsure what I need to use for it? do I need that wrapper? or renrem? I want to make it easy to handle the server and I need to be able to have mods with priveliges, a ban list...all that, but what do I use? thanks

Two steps.

1) Install Linux FDS into a new directory.

2) Download my renegade LFDS wrapper that provides remote administration capabilty.

Remember that the wrapper wants the renegade binary called "renegade". See the readme for more details

For banlist and more administration capability you'll need brenbot that is due any day now.
