Im to good with beveling wood. But I could make a metal version of that
Sand Blast it, make it all shiny.

Be my guest... I'll have a collection.

Jeff rocks. This'll look great alongside my GDI logo... the first one he ever made which he hand-delivered to me on my birthday last year.

[View Forum Message](#) <> [Reply to Message](#)

Dude, you have WAY too much time on your hands. Logos AND a kickass rank?

You rock, Jeff. Say hi to your wife and kid for me. Also, Merry Christmas!

[View Forum Message](#) <> [Reply to Message](#)

I painted the bevels and sides red, I think it makes the letters stand out more.

Well hey aint i a bitch, anyone got a CAD machine?

Subject: Just thought I'd show you a logo.....
Posted by [spreegem](#) on Sun, 28 Dec 2003 22:57:05 GMT
[View Forum Message](#) <> [Reply to Message](#)

That logo looks soo cool. . . so what exactly is planet Crimson? How long did it take you to make that logo, I think several hours at least.

What is a CAD machine?

Subject: Just thought I'd show you a logo.....

[View Forum Message](#) <> [Reply to Message](#)

CAD = Computer Automated Design , it can make 3d images become objects.

Subject: Just thought I'd show you a logo.....
Posted by [spreegem](#) on Sun, 28 Dec 2003 23:24:21 GMT
[View Forum Message](#) <> [Reply to Message](#)

Ohhhh that would be a nifty thing to have, bet they are expensive. . . anyone know how much they cost or have some info on them?

Subject: Just thought I'd show you a logo.....
Posted by [SuperFlyingEngi](#) on Sun, 28 Dec 2003 23:30:14 GMT
[View Forum Message](#) <> [Reply to Message](#)

I don't have exact numbers, but I would imagine that CAD machines are too expensive for none-business, home use. But you could compile a bunch of objects, and then rent a machine for a day. [There's always somewhere you can rent big machines like that]

Subject: Just thought I'd show you a logo.....

[View Forum Message](#) <> [Reply to Message](#)

I only found one place with prices on CAD machines and the prices were high.
<http://www.schott-systeme.com/Pricing.htm> Those prices are expensive and then you have all the other stuff for them to get. . .

EDIT: Found a site that actually has CAD Machines. . .

Subject: Just thought I'd show you a logo.....
Posted by [SuperFlyingEngi](#) on Sun, 28 Dec 2003 23:42:43 GMT
[View Forum Message](#) <> [Reply to Message](#)

Still...you could rent one for maybe 25-50 dollars and spend the rest on computer hardware...

Subject: Just thought I'd show you a logo.....
Posted by [spreegem](#) on Sun, 28 Dec 2003 23:44:45 GMT
[View Forum Message](#) <> [Reply to Message](#)

Where could you rent one at though? And what format would the thing have to be in so the CAD Machine can make it? And what does it make it out of? Is there a minimum or maximum size that the thing has to be? Also JeffLee how did you make those, I am thinking you used a drill, a dremel, a lot of sand paper, brushes, spray paint, and paints and a huge piece of wood.

Subject: Just thought I'd show you a logo.....
Posted by [SuperFlyingEngi](#) on Sun, 28 Dec 2003 23:46:31 GMT
[View Forum Message](#) <> [Reply to Message](#)

Well, look through your phone book to find a person in your area you can rent a CAD machine from, and I'm sure different machines use different programs, but it probably comes with instructions and maybe the computer program. Absolute Worst-Case scenario - you have to design your on a computer built into the machine.

[View Forum Message](#) <> [Reply to Message](#)

There is a CAD machine at my college.

And the correct meaning is Computer Aided Design.

Subject: Just thought I'd show you a logo.....

Posted by [SuperFlyingEngi](#) on Mon, 29 Dec 2003 00:02:06 GMT

[View Forum Message](#) <> [Reply to Message](#)

Yah thats a good thought...colleges always seem to have a lot of pretty toys...just be sure to ask before you borrow, I'm sure the professors wouldn't much care to let you run some stuff off of their machine, as long as you pay for the materials you use in it...

[View Forum Message](#) <> [Reply to Message](#)

Hehe

If you can make me a foam version of an emblem, I'll make you a cast aluminum version of it, if you polish that sucker up real nice and clearcoat it to protect it from scratches, she'll shine like crazy

I'm not gonna make one right away though, takes too much time, and I have a performance engine I'm devoting my time and money into, lol

Subject: Just thought I'd show you a logo.....

Posted by [spreegem](#) on Mon, 29 Dec 2003 02:22:58 GMT

[View Forum Message](#) <> [Reply to Message](#)

I just want to know what tools you used to make it, and where oyu go the wood at, did you take several big boards of wood, stack them up and glue them together with wood glue or something, and then start carving it into the shape?

Subject: Just thought I'd show you a logo.....

Posted by [SuperFlyingEngi](#) on Mon, 29 Dec 2003 02:29:16 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well, actually, the machine works kind of like this [please note: this is only to the best of my understanding, and I might be wrong]: You put a big block of foam or metal into the machine, and the machine proceeds to cut into the block with blades and such until it turns the block of

foam/metal into the on the computer. As an alternative, I think I have heard of CAD machines where it injects plastic into a custom mold to make the 3D .

[View Forum Message](#) <> [Reply to Message](#)

Vacumme Formers, they melt the plastic around the object inside, mainly wood.

Subject: Just thought I'd show you a logo.....

[View Forum Message](#) <> [Reply to Message](#)

OK, all of the logos I make are out of wood, usually Poplar. I have used Oak and Walnut on some natural logos, i.e. not painted. This PlanetCrimson logo is made out of MDF. MDF seems to work a lot nicer than wood because there is no grain and you can cut and sand in any direction. The planet is 2 pieces glued & screwed together on top of each other. The shaping of the curved surface was done by hand with a rasp. I also cut out a lot of the material on the back with my Porter Cable plunge router to make the logo lighter. Then it was sanded smooth and primer put on. Then final paint and a gloss clearcoat. The letters were just cut out on a scroll saw and then beveled with my Dremel with a router attachment. I painted them all gold first but thought it looked too plain so I added the red on the sides.

Does that cover all your questions?

about the CAD thing..

I've used CAD at a job once, basically it was for cardboard cut-outs.

You know the big cardboard cut outs you see at the movies, like the big HULK sign, well I made a few of those while I was in England.

Basically you just mark off all the fold points and set up all the measurements. Then send it to the big ass machine (was about 2 and a half meters wide, maybe more and about 2 meters long.) and then you would see this kinda pen-knife tool skim all over the big piece of cardboard, putting creases, cut parts off and cut out the pieces in the middle and such.

Then just basically took it out brought it over to the laminator, put the big image already cut to size on top of the cardboard, put it through the laminator.

Then just built it and voila a nice big ass cardboard cutout for the movies!!

Well that was one of my past jobs, that was cool. Great money also!

we have 3 cnc routers at work, and 3 cutters, they are amazing to watch.

each one cost oh about... \$400,000, so i seriously doubt you will be going to your local rental places and picking one up for about \$25 an hour, oh, they also weigh close to a ton.

Subject: Just thought I'd show you a logo.....

each one cost oh about... \$400,000, so i seriously doubt you will be going to your local rental places and picking one up for about \$25 an hour, oh, they also weigh close to a ton.

Yeah they are preety exepensive but indeed they are great to watch....

I love the air suction on the machines that keep the card from moving, i wish i could reverse it and use it as a VERY expensive air hockey table, lol!

What does your work use em' for Dante?
